
But my child doesn't like fruit or veg!

Humans seem to have an inclination towards sugary, fatty and salty foods which may come from a time when food was scarce and we needed to get as much as we could whenever we could. Nowadays we have easy access to foods that contain far more of these things than we need. Children need help to acquire healthier tastes and routines and the early years are the ideal time to do this.

But it sometimes seems fruit is more expensive!

Convenience snacks can seem cheap as they are often available in multi packs or on offer. However if you compare the price of a bag of crisps to, for example, a banana you'll find the reality is that the cost is similar. Especially when you think about nutritional value of one compared to the other.

Convenience snacks may have a longer shelf life but the processing and preservatives that give them that shelf life are another good reason to encourage a taste for good, fresh food.

"Apparently some of the additives cause a nerve disorder, but some of the other additives cure it."

There is nothing wrong with the odd treat!

And we at Forge enjoy a treat as much as anyone.

However, we are in the business of helping children to establish good routines that will stand them in good stead for the future. That means that on a daily 'work-a-day' basis we are going to be pushing the Healthy Foods message.

We make no apology for this and we ask that you support us - together we can make a difference and potentially form the habit of a lifetime.

Smart Snacks

For Smart Kids!

Working Together For Healthier Habits!

We want to encourage healthy habits among our pupils

Nobody is perfect all the time but at Forge the message is that fresh fruit and vegetables are essential everyday foods. They help to develop strength and resistance to illness.

We want parents to send in only healthy foods for breaktime snacks and water or milk to drink.

Why is the school telling us what we should be eating?

Habits formed in the early years stay with us!

We have a responsibility to encourage children to develop healthy habits - if they don't get it from us (home & school) they won't get it!

The evidence supporting healthy eating habits as a preventative measure to protect against disease and ill health is as strong as the argument for trying to stop children from smoking.

Yes Please!

- Fresh Fruit
- Fresh Vegetables—carrot sticks make a crunchy snack
- Sandwiches
- Yoghurt
- Water
- Milk

This is a **Positive** Policy aimed at concentrating on what we do want children to eat rather than what we don't. To get into good habits and develop healthy tastes we feel we need to make the available choices healthy ones. If there is a choice of an apple or a chocolate bar too many of us choose the chocolate bar too often. By sticking to healthy choices in school we'll be doing our children a favour.

Examples of Nutritional Info — Fresh Fruit Per 100g

- Bananas—Calories 89, fat 1%, Saturated Fat 1%
- Apples— Calories 52, fat 0%, Saturated Fat 0%
- Oranges—Calories 47, fat 0%, Saturated fat 0%

Fresh fruit and Veg are also high in essential vitamins in the natural form that is most easily absorbed by our bodies.
